44.	Semester 7 Course 5 Acoustics and Calibration.
45.	Semester 7 Course 6 Advanced Digital Editing Workflow
46.	Semester 8 Course 1 Color Correction
47.	Semester 8 Course 2 Binaural and Spatial Audio
48.	Semester 8 Course 3 Music Programming
49.	Semester 8 Course 4 Single Act Editing
50.	Semester 8 Course 5 3D Editing
51.	Semester 8 Course 6 Project
52.	Syllabus revision workshop participants

Preface

The field of Sound Design and Visual Editing offers a wide range of exciting job prospects and employment opportunities for a graduate. A skilled Sound Designer and Visual Editor, can find employment opportunities in film and television production, music recording studios, advertising agencies, video game development companies, and more.

This programme is designed to equip a student with the fundamental skills and knowledge needed to excel in the world of sound design and visual editing. Throughout this program, one will explore the principles of sound design, audio recording and mixing techniques, and visual editing tools. For any young person eager to learn, this program offers a comprehensive and practical approach to mastering the art of Sound Design and Visual Editing.

The expertise gained by one undergoing this UG programme honours will be in high demand as a collaborator with directors, producers, and other professionals to create immersive visual and audio experiences. With the increasing demand for high-quality audio content in various industries, the skills and knowledge one acquires in this program will open doors to a rewarding and dynamic career in Sound Design and Visual Editing.

MGU-UGP (HONOURS)

Syllabus

SEMESTER-I

MGU-UGP (HONOURS)

Syllabus

Mahatma Gandhi University Kottayam

Programme	BA(Hons) SOUND DESIGN AND VISUAL EDITING					
Course Name	FUNDAMENTALS OF ACOUSTICS					
Type Of Course	DSC A					
Course Code	MG1DSCSDV100					
Course Level	100-199					
Course Summary	This course seamlessly blends theoretical principles with practical applications in acoustics. Students gain a solid understanding of sound wave fundamentals, covering amplitude, frequency, and velocity. Exploration of wave propagation, boundary behaviours, and psychological aspects enhances theoretical comprehension. The focus is on translating theory into practical solutions for real-world acoustical challenges. Topics like reflection, refraction, interference, and acoustic impedance provide tools for addressing diverse scenarios. The course not only imparts theoretical knowledge but also cultivates the ability to apply this understanding in practical contexts, making it invaluable for those entering the field of acoustics.					
Semester	I		Credits		4	Total Hours
Course Details	Learning Approach		Lecture	Tutorial	Practical/ Practicum	
	Lecture, case studies, analysis		3		1	Library, seminar and assignment test, Etc.
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains *	PO No
	Upon completion of this course, students will be able to;		
1	Analyse and illustrate the fundamental characteristics of sound waves	A,U	1,2,10
2	Elucidate the concept of harmonics, detailing how harmonic content, intervals, and overtones contribute to the overall quality of a sound.	Ap	1,2,10
3	Analyse the impact of medium density on sound transmission,	An	1,2,10
4	Understanding of how sound waves interact with various phenomena and surfaces.	U	1,2,10
5	Understand, analyse, and apply acoustic impedance and absorption principles for optimizing room acoustics in diverse applications.	U,A,An	1,2,10
6	Analysing and explaining the intricate aspects of auditory perception	An,U	1,2,10

***Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)**

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Characteristics Of A Sound Wave				
1	1.1	What Is Sound? Nature And Characteristics Of A Soundwave, Amplitude, Frequency, Velocity, Wavelength, Velocity, Phase	5	1
	1.2	Simple and complex sound, Harmonic Content-Intervals, Octaves, Partials, And harmonic.	3	2
	1.3	Overtone And Timbre, Sound envelope	3	2
	1.4	practicum :Use the sound generator to produce sound waves of varying amplitudes, frequencies, wavelengths, complex wave and harmonic content Measure and observe the effects of changing these parameters using the oscilloscope or sound level meter.	10	2
Basics Of Wave Propagation				
2	2.1	Wave Equation And Its Significance In Acoustics	3	2
	2.2	Transverse And Longitudinal Waves.	1	2
	2.3	Sound Transmission And Medium Density.	3	3
Boundary Behaviour Of Sound Wave				
3	3.1	Reflection Of Sound Waves And Its Applications, Refraction And Its Effects On Sound Propagation, Diffraction Phenomena In Relation To Obstacles, Interference Of Sound Waves And Constructive/Destructive Interference	4	4
	3.2	Definition And Significance Of Acoustic Impedance, Factors Affecting Acoustic Impedance	4	4,5
	3.3	Materials And Structures Influencing Sound Absorption	3	4,5
	3.4	Practical Applications Of Acoustic Impedance And Absorption In Room Acoustics	3	4,5
	3.5	practicum: Integrate the concepts learned into practical applications across different fields, including architecture, automotive design, and entertainment. Engage students in brainstorming innovative solutions for improving sound quality and addressing acoustic challenges in various environments.	10	4,5
Psychology Of Sound				
4	4.1	Anatomy Of Hearing, Critical Bands.	4	6
	4.2	Amplitude and Loudness- The decibel, sound power and pressure , sound intensity level sound pressure level, Frequency and Pitch- Low , Upper bass, Midrange, Upper mid, Treble	5	6
	4.3	Dynamic Range Of Hearing. Frequency Range Of Hearing .	1	6
	4.4	Frequency and loudness -Equal Loudness Curve, Fletcher And Munson Curve, Masking . Doppler Effect.	3	6
	4.5	Present graphs depicting equal loudness curves to the students.	10	6

Syllabus

Mahatma Gandhi University Kottayam

Programme						
Course Name	RADIO PROGRAMME PRODUCTION.					
Type Of Course	MDC					
Course Code	MG2MDCSDV100					
Course Level	100-199					
Course Summary	This Multidisciplinary Radio programme Production covers the societal impact of radio, station operations, legal considerations, and various program formats. Students develop practical skills in sound editing, production, voice modulation, and interview techniques. Hands-on training with recording equipment is provided. The program culminates in a project phase focused on social welfare advocacy, where students plan, execute, and showcase radio programs addressing social issues in a portfolio.					
Semester	II	Workstation			3	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	
	lecture tutorials, studio practice, and hands-on practicum sessions		2	1	Library , assignment test, Etc.	60
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Apply knowledge of radio station operations, legal considerations, and ethical standards to plan and execute radio programs.	A,U	1,2,3,4,6,7,8
2	Develop practical skills in scriptwriting, sound editing software operation, production techniques, voice modulation, and the effective use of sound effects and music for impactful radio programs.	S	1,2,3,4,5
3	Generate unique radio program concepts, plan and execute live broadcasts, apply project management principles to produce radio features.	C	1,2,3,4,5
4	Assess the effectiveness of radio programs in raising awareness about social issues through peer reviews, focusing on content, messaging, and overall impact, and utilize feedback for continuous improvement.	E	1,2,3,4,5,6,7,8,9,10

**Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)*

COURSE CONTENT

Module	Units	Course description	Hrs	CO No.
Introduction to Radio Broadcasting.				
1	1.1	Impact of radio on society and culture.	1	1
	1.2	Radio Station Operations-Structure and organization of a radio station, Roles and responsibilities within a radio station, Legal and ethical considerations in radio broadcasting.	2	1
	1.3	Introduction to Radio Program Formats- various radio program formats (e.g., talk shows, music shows, news programs), Understanding target audiences for different formats, Case studies of successful radio programs.	2	1
	1.4	Basics of Scriptwriting for Radio- writing for the ear, Crafting compelling radio scripts, Practical exercises in scriptwriting	2	1,2
	1.5	Introduction to Sound Editing Software- Overview of popular sound editing software, Basic audio editing techniques, Hands-on practice with editing tools	5	1,2
Production Techniques				
2	2.1	Voice Modulation and Presentation Skills- Techniques for effective voice modulation, Enhancing clarity and articulation, Public speaking and presentation skills.	2	1,2
	2.2	Effective Use of Sound Effects and Music- Incorporating sound effects, music for different program moods, Creating a soundscape for radio productions.	3	1,2
	2.3	Interview Techniques and Conducting Live Shows- Planning and conducting interviews, Managing live shows, Audience engagement strategies.	3	1,2
	2.4	Hands-on Training with Recording Equipment- Operating recording equipment and software, Practical exercises in recording and editing, Troubleshooting common recording issues.	10	1,2
Project and Portfolio Development				
3	3.1	Developing a Radio Program Concept- brainstorming for unique program concepts, emphasizing the integration of social welfare messages, Collaborate with local NGOs to identify potential program concepts that raise awareness about social issues.	5	2,3
	3.2	Planning and Executing a Radio Show- Plan and executing a live radio broadcast that highlights a specific social welfare program or initiative in collaboration with a relevant organization, Coordinate interviews with individuals involved in social welfare initiatives to provide firsthand accounts.	5	2,3
	3.3	Project Management in Radio Production- Apply project management principles to organize and produce a series of radio features focusing on different social welfare topics, Allocate resources and time effectively to ensure the successful completion of social welfare-themed projects.	5	2,3
	3.4	Creating a Portfolio of Produced Radio Programs- Assemble a portfolio that includes a variety of radio programs, with a significant portion dedicated to social welfare issues, Include reflections on the impact and effectiveness of each program in raising awareness and promoting positive change.	10	2,3

	3.5	Peer Review and Feedback Sessions- Conduct peer reviews with a specific focus on the social welfare content, assessing how effectively each program addresses the intended audience and contributes to societal awareness, Encourage constructive feedback on messaging, storytelling, and the overall impact of the social welfare-themed projects.	5	4

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING						
Course Name	ACOUSTICS AND PSYCHOACOUSTICS						
Type Of Course	DSE						
Course Code	MG3DSESDV200						
Course Level	200-299						
Course Summary	The course covers fundamental principles in acoustics, starting with spectral analysis, sound localization, and psychoacoustic effects. It delves into the basics, including the decibel, inverse square law, and measuring sound pressure levels, progressing to room acoustics, sound isolation, and the impact of room dimensions and shape. The curriculum extends to advanced topics like sound behavior, absorption coefficients, and the design of auditoriums. Through case studies, students apply theoretical knowledge to real-world scenarios, fostering a comprehensive understanding of acoustic principles and their practical applications.						
Semester	III			Credits		4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	60	
	Textbook and theoretical study, hands-on practical applications, listening exercises and critical analysis	3	1		Library, seminar and assignment test, Etc.		
Pre-requisites, if any							

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	understanding of frequency and loudness perception and analyze psychoacoustical effect	An,U	1,2,10
2	Analyse auditory phenomena	An	1,2,10
3	Apply knowledge to match acoustics to program material, optimizing characteristics	A	1,2,10
4	understand and apply the principles of sound measurement	U,A	1,2,10
5	analyse Room modes and evaluate the impact of resonance , echoes , and reflections.	An,E	1,2,10
6	applying acoustic principles for effective sound management	A	
7	measure and understand the necessity of reverberation time, discern typical periods in diverse spaces, evaluate absorption coefficients, and grasp the acoustical features essential for designing auditoriums	U,E	1,2,10

8	fostering critical analytical skills and real-world application of theoretical knowledge	An,S	1,2,3,4,6
*Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)

Programme						
Course Name	FUNDAMENTALS OF DIGITAL AUDIO WORKSTATION					
Type Of Course	DSC B					
Course Code	MG3DSCSDV202					
Course Level	200-299					
Course Summary	The course covers analyzing the binary system and digital audio theory, understanding conversion processes, exploring audio formats, and gaining proficiency in technology components. Students will adeptly choose acoustic transducers, use DAW components, apply editing tools, and demonstrate competence in diverse recording techniques. The course emphasizes practical application, including interviewing influential figures and creating empowering radio programs					
Semester	III	Credits			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	
	lecture tutorials, studio practice, and hands-on practicum sessions	3	1	Library , assignment test, Etc.	75	
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	analyze the binary number system and applications, and explain digital audio theory.	An,U	1,2,3
2	understand and apply processes of analog-to-digital and digital-to-analog conversion in digital audio systems	U,A	1,2,3
3	explain the characteristics of various audio file formats, analyze their advantages and disadvantages, and understand the key features associated with each format	U, An	1,2,3
4	proficiency in understanding and utilizing essential components of audio technology.	U,A	1,2,3
5	adeptly choose, understand, and apply diverse acoustic transducers for specific audio purposes	K,U,A	1,2,3
6	use DAW components apply editing tools and software integration for efficient audio production	U,A	1,2,3
7	apply diverse recording techniques, analyze their effectiveness, and build a comprehensive perspective on audio program production,	A,An,C,S	1,2,3
8	Demonstrate audio production competence, interviewing proficiency with influential figures, and the ability to create empowering radio programs.	A,An,C,S	1,2,3,4,5,6,7,8,10

Programme						
Course Name	SOUND DESIGN FOR ANIMATION					
Type of Course	MDC					
Course Code	MG3MDCSDV200					
Course Level	200-299					
Course Summary	Sound Design for Animation provides a comprehensive introduction to the fundamental principles and techniques of integrating sound into animated projects. Aimed at individuals with little to no prior experience in sound design or animation, the course is designed to equip participants with the skills necessary to enhance their animated creations through the strategic use of sound.					
Semester	III	Credits			3	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical / Practicum	Others	
	Experiential, Constructivist and Cognitive learning approach	0	3	0	0	45
Prerequisites, if any	To enroll in the "Sound Design for Animation" course, learners should possess a foundational understanding of sound-related concepts, basic computer skills, and an open-minded approach to learning and collaboration. This foundation will contribute to a more effective and enriching learning experience in the course.					

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Describe the basics of acoustics and its relevance to sound design.	K	1
2	Comprehend the relationship between sound and animation, understanding how sound contributes to storytelling in the context of animated projects.	U	2
3	Apply recording techniques using appropriate recording equipment and basic audio editing software.	A	1
4	Analyze case studies to understand the role of sound in animated storytelling.	An	2
5	Apply sound design principles to create and integrate simple soundscapes into animated projects.	C	10

**Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)*

COURSE CONTENT

Content for Classroom transaction (Units)

Module	Units	Course description	Hrs	CO No.
1	Introduction to Sound in Animation			
	1.1	Fundamentals of Sound Understanding the basics of sound waves, Introduction to frequency, amplitude, and pitch, Overview of different types of sounds	3	1
	1.2	Importance of Sound in Animation Exploring the role of sound in storytelling, Case studies of successful animated projects, Introduction to Foley and sound effects	2	2
2	Recording and Editing Techniques			
	2.1	Introduction to Recording Choosing the right microphone for different purposes, Recording environments and acoustics, Basic microphone techniques	2	3
	2.2	Editing Software Introduction to sound editing software, Basic editing techniques: cutting, copying, pasting, Understanding timelines and layers in audio editing	3	3
	2.3	Foley Artistry Overview of Foley art and its significance in animation Hands-on Foley recording session, Editing Foley sounds, and integrating them into animations, Assigning a Foley project with an animated scene	5	3
3	Sound Design Principles for Animation			
	3.1	Understanding Sound Design Defining sound design and its role in animation, Analyzing the emotional impact of sound, Case studies of iconic animated scenes and their sound design	4	4
	3.2	Creating Atmosphere and Ambience Techniques for creating realistic environments, Using background sounds to enhance storytelling, Integrating ambient sounds with animation	3	3
	3.3	Music in Animation Understanding the role of music in animation, Choosing appropriate music styles for different scenes, Licensing and incorporating music into animations	3	2
	3.4	Character Sound Design Designing unique sounds for characters, Creating character voice overs and dialogues, Syncing character sounds with animation, Character sound design assignments	10	5

	3.5	Mixing Premix (Dialogue, sound effects and music), Mixing concept for mono, stereo and surround sound, Normalization for different platform	10	3
5	Teacher Specific Content			

Teaching and Learning Approach	<p>Classroom Procedure (Mode of transaction)</p> <p>CD1 - Lectures: Introduction to sound waves, frequency, amplitude, and animation principles.</p> <p>CD2 - Hands-on Workshop: Introduction to sound editing software and basic editing techniques.</p> <p>CD3 - Studio Session: Basic recording techniques, using recording equipment, and introduction to animation software.</p> <p>CD4 - Assignments: Simple tasks focusing on applying learned concepts like cutting, copying, pasting, and arranging audio clips using editing software. Creating and editing Foley sounds etc.</p>

SEMESTER-IV

MGU-UGP (HONOURS)

Syllabus

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	LIVE SOUND REINFORCEMENT					
Type Of Course	DSC A					
Course Code	MG4DSCSDV200					
Course Level	200-299					
Course Summary	The course provides a comprehensive overview of Sound Reinforcement, covering Signal Dynamics, Mixer Operations, Amplification, Signal Processors, and Sound System Techniques. It delves into advanced topics such as Microphone Selection, Mixing Techniques, and Designing Sound Systems. Practical applications include Technical Rider interpretation, emphasizing professionalism, effective communication, and hands-on experience in live sound mixing for diverse scenarios.					
Semester	IV	Credits			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	
	lecture tutorials, practice, and hands-on sessions practicum	3	1	1	75	
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	illustrate sound reinforcement principles, analyze signal dynamics, and critically examine amplifier and speaker configurations. They will gain expertise in mixer operations, signal processing, and system optimization, enabling them to design and deploy effective sound systems for various applications.	An,U,C	
2	understand and apply processes of analog-to-digital and digital-to-analog conversion in digital audio systems	U,A	1,2,3
3	apply microphone selection and placement strategies,will evaluate advanced mixing techniques ,Additionally, students will assess the setup and management monitoring systems	A,E,C	1,2,3
4	create sound system designs by considering factors like primary system use, indoor or outdoor settings, and layout plans. They will evaluate mixing locations for optimal system performance	C,E	1,2,3
5	analyze power amplifier requirements	An	1,2,3
6	Design technical Riders, signal flow, and develop professionalism and communication skills. They will also demonstrate live sound mixing proficiency for diverse applications, including bands, solo artists, and theatrical productions	C	1,2,3,4,5,10

**Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)*

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Live sound system components				
1	1.1	What is Sound Reinforcement? Sound System Model.	2	1
	1.2	Signals and Transmission: Signal dynamics-noise, SNR, distortion/clipping, headroom, dynamic range. Different signal levels - mic level, line level, speaker level, dBm, dBu or dBv, dBV, dBfs. Types of cables – mic cable, line cable, speaker cable. Types of connectors – TS, TRS, XLR, RCA, Speakon. Balanced and unbalanced signal, DI box, snake cables .	3	1
	1.3	Mixer :Gain structuring. Channel strip - gain, HPF, EQ, pre/post auxiliary, pan, PFL/AFL, mute, fader . Grouping. Master fader. Meters- VU, Peak, PPM, LED,	3	1
	1.4	Amplifier and Speakers -Concept of active and passive components, Power Rating - RMS, program, peak. Speaker and amplifier power matching, impedance matching, bridge connection.	3	1
	1.5	Signal Processors Types of EQ - graphic EQ, parametric EQ, semi-parametric EQ, shelving EQ. Types of audio filters - HPF, BPF, LPF, notch filter. Types of dynamic processors - gate, compressor, expander, limiter. Types of effects processors - delay, reverb, chorus. Crossover.	4	1
Sound Reinforcement Techniques				
2	2.1	Microphone selection and placement - Source-to-Microphone Distance and Sound Quality ,Phasing Issues with Microphone Usage,Issues Associated With Articulating Certain Sounds,Common Microphone Handling Issues, Miking Soloists – Speaking and Singing ,Miking Instruments and Ensembles ,Stereo Miking Techniques	5	2
	2.2	Mixing techniques - Gain staging, EQ, compression, effects, and routing. Feedback control - Recognizing and eliminating feedback in live sound systems.Maximizing Gain Before Feedback	5	3
	2.5	Monitoring - Setting up and managing stage and house monitoring systems.	5	3
Designing the Sound System				
3	3.1	Design Considerations, Primary System Use, Indoor or Outdoor, Design Model and Layout Plan, Mixing Locations ,	5	4
	3.2	Front of House Loudspeaker Placement ,Transformer-Based Distributed Speaker Systems, Monitor Speaker Placement and Microphone Interaction	5	4
	3.3	Power Amplifier Requirements, Ground Loops and Induced Noise, Sound.	5	5
Practical Applications				
4	4.1	Technical Rider :Learn how to read and draw a Technical Rider of a band or a show, signal flow.	2	6
	4.2	Professionalism and communication- Professionalism: Timeliness, Preparedness, Appearance, Attitude, Problem-solving, Reliability, Continuous learning. Communication: Active listening, Clear and concise language, Open and honest communication, Respectful tone, Responsiveness, Teamwork, Positive body	3	6

		language, Building rapport, Adapting communication style. Building Relationships: Networking, Offer assistance and support, Show genuine interest, Show appreciation.		
	4.3	Live sound mixing for various applications - design, setup and operate Bands, solo artists, theatrical productions, and more	25	6
5		Teachers specific		

Teaching and Learning Approach	<p>Classroom Procedure (Mode of transaction)</p> <p>CD1: Lecturing With Visual Aid Integration: Traditional Lecturing With Visual Aids (Slides, Diagrams, Multimedia) For Enhanced Comprehension.</p> <p>CD2: Hardware Demonstration - Explore the essential hardware components of live sound reinforcement, including microphones, mixers, and amplifiers, highlighting their functions and usage for a hands-on understanding</p> <p>CD3: Hands-On Practice: Engage in practical exercises and program demonstrations for direct application and skill development in a controlled learning environment."</p> <p>CD4: Practicum in the Real World: Apply acquired knowledge and skills to real-world scenarios, emphasizing practical application and problem-solving in authentic settings.</p> <p>CD5: Troubleshooting - Learn effective troubleshooting techniques for common issues in live sound reinforcement setups, addressing challenges related to hardware, connections, and signal flow to enhance problem-solving skills</p>

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ELECTRO ACOUSTICS					
Type Of Course	DSE					
Course Code	MG4DSESDV200					
Course Level	200-299					
Course Summary	This course covers electronics and audio engineering essentials, introducing concepts like voltage, current, and Ohm's law. It explores electronic components, transmission techniques, and signal dynamics, emphasizing cable types and connectors. The curriculum includes in-depth study of microphones, loudspeakers, and sound recording methods, spanning analog to digital technologies. Students gain practical skills in cables and connectors making, fostering a comprehensive understanding of audio engineering principles.

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Basic concept of electronics				
1	1.1	Concept of voltage, current, resistance and ohm's law,	2	1
	1.2	Sources DC and AC supply,	2	1
	1.3	Electronic components- passive and active electronic components-resistors-colour coding- resistors- capacitors-Audio transformers. Electronic components.	2	1
	1.4	DC power supply using system using diodes-Transistor basic concept and biasing methods-special diodes-LED, Zener diode, varactor diode, FET& MOSFET.	2	1
	1.5	Concept of op-amp-characteristics of op amp and application circuits	2	1
Transmission techniques				
2	2.1	Cable and its characteristics-impedance-frequency response-twisted pair cable-snake cable-shielded cable-stereo cable co-axial cables and RG standards	2	2
	2.2	Concept of OFC and its applications.	3	2
	2.3	Signal dynamics-noise, SNR, distortion/clipping, headroom, dynamic range. Different signal levels - mic level, line level, speaker level,dBm,dBu or dBv, dBV,dBfs. Types of cables – mic cable, line cable, speaker cable. Types of connectors –TS,TRS, XLR, RCA, Speakon. Balanced and unbalanced signal		2
	2.4	cables and connectors making		2
Microphones				
3	3.1	Operating Principles:Magnetic Induction, Variable Capacitance, Dual-Element Microphones	2	5
	3.2	Characteristics- Impedance, Directional Characteristics, Sound Response- Frequency Response, Overload Limit, Maximum Sound-Pressure Level, Sensitivity,Self-Noise,Signal-To-NoiseRatio, Proximity Effect, Hum, Humbucking	2	5
	3.3	Special-Purpose Microphones-Lavalier Microphones , Shotgun Microphones, Parabolic Microphone System, Headset And Earset Microphones, Contact Microphones, Boundary Microphones, Stereophonic Microphones, Middle-Side Microphones, Infinitely Variable Pattern Microphones, Binaural And Surround-Sound Microphone Systems, Binaural Microphone Head.	1	5
loud speaker				
4	4.1	Moving coil loudspeaker,Electrodynamic loudspeaker. Horn type and Cone	3	6
	4.2	characteristics -Impedance, sensitivity, Distortion, Frequency response, power handling, Directivity.	2	6
	4.3	Type Loudspeaker Baffles and Enclosures,	8	6
	4.4	Multi way speaker system, Crossover network	7	6

	4.5	Headsets-in ear and on ear types	10	6,7
	4.6	Recording of sound-Analog recording-early recording machines- Magnetic tape-magnetic tape recording process-Digital tape recording-Mass storage base system-magnetic hard disk, optical disk, memory card etc.	10	6,7
5	5.1	Teachers specific		

Teaching and Learning Approach	Classroom Procedure (Mode of transaction) CD1: Lecturing With Visual Aid Integration: Traditional Lecturing With Visual Aids (Slides, Diagrams, Multimedia) For Enhanced Comprehension. CD2: Hands-On Practice: Engage in practical exercises and program demonstrations for direct application and skill development in a controlled learning environment."

Module	Units	Course description	Hrs	CO No.
Foundations of Environmental Studies				
1	1.1	Introduction to Environmental Studies: Definition and scope of environmental studies, including its interdisciplinary nature and relevance to society. Overview of key environmental concepts such as ecosystems, biodiversity, and natural resources. Basic principles of ecology, including energy flow and nutrient cycling.	10	1
	1.2	Human-Environment Interactions: Analysis of the interactions between human societies and the environment, including impacts on ecosystems, biodiversity, and natural resources. Exploration of environmental ethics, environmental justice, and the concept of sustainable development.	10	1
Environmental Issues and Solutions				
2	2.1	Global Environmental Challenges: Overview of major global environmental challenges such as climate change, biodiversity loss, deforestation, and pollution. Environmental Treaties.	5	1
	2.2	Mitigation and Adaptation Strategies: Examination of mitigation and adaptation strategies to address environmental challenges, including renewable energy adoption, waste management, and sustainable resource management practices. Case studies highlighting successful environmental initiatives and innovative solutions implemented by governments, organizations, and communities.	5	1
Environment and Media Engagement				
3	3.1	Role of Media in Environmental Protection: Environmental communication and the role of media in creating awareness. Role of media in identification and exploration of environmental issues. Discussion on the emergence of new media platforms and their impact on environmental communication. Examination of the role of social media in amplifying environmental messages, facilitating citizen journalism, and online activism.	5	2, 3
	3.2	Media and Environmental Disaster Management: Pre-disaster, during disaster and post-disaster communications. Case studies highlighting the role of social media during the Kerala Floods 2018. Project: educational videos, social media campaigns, public art installations and podcast series/Interviews exploring various environmental topics.	10	2, 3
4	Teacher Specific Content			

Teaching and Learning Approach	<p>Classroom Procedure (Mode of transaction)</p> <p>CD1 - Lectures: Lectures will provide foundational knowledge on key concepts, theories, and case studies in environmental communication.</p> <p>CD2 - Interactive Discussions: Interactive discussions will facilitate student engagement and critical thinking on course topics.</p> <p>CD3 - Case Studies: Case studies will be used to illustrate real-world applications of environmental problems and solutions.</p> <p>CD4 - Multimedia Presentations: Multimedia presentations, including videos, documentaries, and online resources, will complement lectures and readings, providing visual and auditory reinforcement of course concepts.</p>

Mahatma Gandhi University

Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	INTERNSHIP					
Type of Course	INT					
Course Code	MG4INTSDV200					
Course Level	200-299					
Course Summary	<p>An internship, or on-the-job training, enables the apprentice to acquire practical industry-based experience and helps them to assimilate professionalism in their career. Internships offer learners a period of practical experience in the industry relating to their field of study.</p>					
Semester	IV	Credits			2	
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	Total Hours
Pre-requisites, if any						

GUIDELINES FOR INTERNSHIP

- An undergraduate in Sound design and Visual editing needs to undergo a professional training at an **Advertising Company/ Television Channel/ Sound studio/ Sound reinforcement industry/ Radio station /Media Production Firm** for a period of one month.
- The intern should prepare individual reports with a certificate from the organization under which he/she did the internship.
- The Internship report should be verified and assessed for evaluation by the faculty in charge.

Internship Evaluation Scheme

I. **Components and distribution of marks of internal evaluation – 15 Marks**

- Initiative - 3 Marks
- Professionalism and work ethics - 5 Marks
- Contribution to society and organization - 7 Marks

II. **Components and distribution of marks of Final evaluation. - 35 Marks**

- Report - 20 Marks
- Viva-voce - 15 Marks

Syllabus

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING						
Course Name	SOUND DESIGN						
Type Of Course	DSC A						
Course Code	MG5DSCSDV300						
Course Level	300-399						
Course Summary	This course covers analytical listening, soundwalk practicums, and the elements of sound structure. It explores voice aspects, including voice-overs and narration techniques, and delves into sound effects, music, and mixing considerations for various media. The curriculum emphasizes practical skills through projects, culminating in the creation of a tailored soundscape for a fictional video to enhance the immersive storytelling experience.						
Semester	V			Credits		4	Total Hours

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Cultivate the ability to critically analyze and evaluate sound elements, employing analytical and critical listening techniques	E,An	1,3,6,7,8
2	Apply advanced skills in utilizing the speaking voice, voice-overs, and narration, covering aspects like frequency range, spectral content, nonverbal speech influences, and microphone selection, while demonstrating proficiency in voice acting, recording techniques, and automated dialogue replacement.	A	1,3,4,5,6,7,8,9,10
3	Showcase creative proficiency in contextual and narrative sound	C	1,3
4	Demonstrate advanced skills in maintaining an aesthetic perspective in audio mixing for various media	E,S	1,10
5	Demonstrate creative proficiency by independently selecting and implementing a diverse range of audio elements to craft a customized soundscape	C	1,3,10

**Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)*

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Introduction to Audio Mastering				
1	1.1	Overview of mastering in the audio production process, Historical context and evolution of mastering techniques	2	1
	1.2	Elements of a Mastering Studio, Essential equipment and software for mastering, Studio setup and acoustic considerations	3	1
	1.3	Critical Listening Skills, Developing a discerning ear for audio nuances, Analyzing frequency balance, dynamics, and spatial characteristics	5	1
	1.4	Loudness Standards and Perception, Understanding the concept of loudness in audio, Psychoacoustics and the perception of loudness.	5	1
Technical Aspects of Mastering				
2	2.1	Signal Processing in Mastering- Equalization, compression, and limiting techniques, Use of specialized mastering processors	5	2
	2.2	Stereo Imaging and Enhancement, Techniques for widening and enhancing stereo images, Mid-Side processing in mastering	5	2
	2.3	Dynamic Range Control, Advanced compression and limiting strategies, Multi-band compression for dynamic control	5	2
	2.4	Automation and Batch Processing- Implementing automation for consistent results, Batch processing for efficiency in mastering multiple tracks, Mid/Side Processing	3	2
Loudness Normalization and Standards				
3	3.1	Loudness Measurement Standards- Introduction to loudness measurement units (LUFS), Compliance with broadcast and streaming standards	2	3
	3.2	Loudness Normalization Techniques- Applying loudness normalization to achieve consistent playback, Utilizing tools like True Peak meters for accurate normalization	5	3
	3.3	Loudness Normalization in Different Platforms- Adapting to various delivery platforms (streaming, broadcast, etc.), Platform-specific loudness requirements and best practices	5	3
Practical Applications and Project Work				
4	4.1	Case Studies in Mastering, Analysis of successful mastering projects, Genre-specific mastering considerations	5	4
	4.2	Project-Based Learning, Hands-on mastering projects applying the techniques learned, Peer review and constructive feedback sessions, Presentation and discussion of final projects	10	4
		Practicum : Final Project: Mastering Portfolio, Students create a mastering portfolio showcasing their skills	10	5

Narrative structure in Short films				
1	1.1	Identify and analyse narrative structure in short films; linear/nonlinear, cut aways, inserts.	5	1
	1.2	Apply editing techniques to build tension, pace, and character development.	5	1,2
	1.3	Effectively utilise cuts, transitions, and sound design to enhance the film's emotional impact.	5	1,2
Software Fluency & Troubleshoot				
2	2.1	Demonstrate fluency in using industry-standard editing softwares.	7	2
	2.2	Troubleshoot technical challenges and maintain optimal workflow during the editing process.	5	2
Software Interfaces				
3	3.1	Analyse and draw inspiration from renowned short films and editors.	5	3
	3.2	Experiment with non-linear narratives, rhythm, and form.	5	3
	3.3	Customising software interface as per workflow.	3	3,2
Short Narrative Editing				
4	4.1	Create a short narrative from given footage. (First Cut - Final Cut)	10	4,3,2,1
	4.2	Provide constructive feedback and participate in the revision process to refine the film.	10	4,3,2,1
Teacher's Specific				
5	5.1			

Teaching and Learning Approach	<p>Classroom Procedure (Mode of transaction)</p> <p>CD1: Lecturing With Visual Aid Integration: Traditional Lecturing With Visual Aids (Slides and Multimedia) For Enhanced Comprehension.</p> <p>CD2: In-person workshop: Offers hands-on practice with editing software, direct instructor feedback, and collaborative learning.</p> <p>CD3: Hands-On Practice: Engage in practical exercises and program demonstrations for direct application and skill development in a controlled learning environment.</p> <p>CD4: Live editing challenges: Participate in real-time online challenges where instructors guide students through editing specific action sequences, fostering quick decision-making and problem-solving skills.</p> <p>CD5: Mentorship program: Pair students with experienced film editors for personalized guidance and project feedback.</p>

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Introduction to radio program and Production Equipment				
1	1.1	Different types of radio stations, Overview of production equipment in radio broadcasting. Importance and functions of production equipment. Basic technical terminology and concepts.	3	1
	1.2	Understanding the principles of FM and AM modulation. Components and operation of FM transmitters and receivers. Components and operation of AM transmitters and receivers. Differences between FM and AM broadcasting technologies.	5	1
	1.3	Compliance with Regulations- Adhering to broadcasting regulations and licensing requirements is crucial for legal operation. Compliance ensures that content meets standards regarding decency, accuracy, and fairness.	2	1
Presentation techniques				
2	2.1	Spoken word programmes- Talks and discussions, interviews. Drama, Feature and documentaries, Magazines, Commentaries, Talk shows, quizzes. Advertisements, reports, poetry recitation, Interactive programmes, News based programmes- News Bulletins, News magazines, newsreels. Music programmes- Vocal, instruments. Musical concerts- Classical and light, musical operas, musical magazines etc.	5	2
	2.2	Presentation techniques- objective technique, subjective techniques - personalised presentation, aggressive presentation. Categories of presenters- news reader, announcer, compere etc. Requirements for a presenter- modulated voice, proper pronunciation, proper delivery, alertness, microphone manners, general knowledge, love for broadcasting etc. Type of listeners - Active listener, passive listener.	5	2
Production Techniques				
3	3.1	Miking the single speaker in radio- space and perspective: monaural, stereo, and surround sound, Radio interview and panel setups, Single-Microphone Technique microphone selection and mounting, creating perspective, creating movement, multi microphone technique, stereo microphone technique, perspectives, surround-sound technique	10	3
		mobile news gathering-radio mng-microphones, recorder, microphone mixer, headphones, transmission. Small-Scale EFP, Large-Scale EFP	10	
Project				
4	4.1	Script writing for various presentation formats, Preparing scripts- simple spoken language, effective use of emotions and feelings, speed and rhythm etc. Marking symbols in the script - pauses, modulation, highlighting, breaking long sentences, connecting sentences etc,	15	4
	4.2	Final Project: Recorded programme of 10 mts duration for Radio	20	5

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ACOUSTIC ARCHITECTURAL DESIGN TOOLS					
Type Of Course	DSE					
Course Code	MG6DSESDV303					
Course Level	300-399					
Course Summary	This course emphasizes the importance of engineering drawing and orthographic projections, covering architectural elements and sizes. It explores the advantages and system requirements of CAD, focusing on creating, saving, and exiting projects. Students will master CAD tools, UCS, draw/modify toolbar shortcuts, environment setup, paper/model space, layers, dimensions, and styles. The course includes creating orthographic drawings, applying dimensions, symbols, and design elements, with a special focus on architectural spaces like studios and auditoriums.					
Semester	VI	Workstation			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/Practicum	Others

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ETHICS AND LAW FOR MEDIA					
Type Of Course	VAC					
Course Code	MG6VACSDV300					
Course Level	300-399					
Course Summary	This course delves into media law and ethics, covering fundamental rights, freedom of speech, and the role of media in democracy. It examines regulations governing defamation, privacy, sedition, and obscenity, along with laws related to broadcasting, advertising, and copyright. Ethical principles in journalism, public relations, and social media are also explored.					
Semester	VI	Credits			3	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/Practicum	Others	
	lecture tutorials, studio practice, and hands-on sessions	0	3	0	Library, assignments, test, Etc.	45
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Understand Fundamental rights, press freedom, democracy-media role, Press Council functions.	U	
2	Understand Historical evolution of Indian media laws, including defamation, privacy, sedition, copyright.	U	
3	Understand Fundamentals of ethics, ethical theories, conscience role, and media ethics principles.	U	

***Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)**

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Introduction to Indian Constitution				
1	1.1	Salient features, Fundamental Rights, Freedom of Press, Concept of Freedom of Speech & Expression	5	1
	1.2	Democracy & Media as Fourth estate, Press Council of India- Its organizational structure, functions, history and rationale behind its establishment, its powers; Code of conduct for journalists	5	1
Media Regulations in India				
2	2.1	History of Laws regulating the media in India: Defamation clauses, Right to privacy, Right to Know, Laws related to Sedition, Obscenity	5	2
	2.2	Contempt of Court Act 1971, Information Technology Act 2000 and the amendment Act of 2008, Right to Information Act 2005, Contempt of Parliament, Working Journalists Act, Cyber Laws etc.	5	2
	2.3	Laws related to Broadcasting media, Advertising, Advertising Council of India	5	2
		Copyright Act 1957, International Copyright laws, Concept of authorship	5	2
Moral Ethics and Media				
3	3.1	An Introduction to the Terms and Concepts of Ethics: Definition of Ethics and its branches, stages of ethical development, Major theories in Ethics, Role of conscience in ethical decision making; code of ethics	5	3
	3.2	Moral relativism and ethnocentrism, Principles of Ethical journalism, Public relations and Ethics	5	3
	3.3	Media Ethics: Why Ethics Matters in the Field of Media, Ethical perspectives of print, audio and visual media; ethical values, Social Media and Fake news	5	3
4		Teachers specific		

Teaching and Learning Approach	Classroom Procedure (Mode of transaction) CD1: Lecturing With Visual Aid Integration: Traditional Lecturing With Visual Aids (Slides, Diagrams, Multimedia) For Enhanced Comprehension. CD2: Case studies

SEMESTER-VII

MGU-UGP (HONOURS)

Syllabus

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ADVANCED LIVE SOUND REINFORCEMENT					
Type Of Course	DCC					
Course Code	MG7DCCSDV400					
Course Level	400-499					
Course Summary	This comprehensive live sound engineering course covers system overview, binding channels to ports, control surface, and digital advantages. Acoustics and system design principles are explored, emphasizing loudspeaker placement, coverage, and acoustical treatment. Practical exercises include hands-on system design, loudspeaker simulation, and live system testing, enhancing students' proficiency in live sound engineering.					
Semester	VII			Credits		4
Course Details	Learning Approach	Lecture	Tutorial	Practical/ Practicum	Others	Total Hours
	lecture tutorials, practice, and hands-on sessions practicum	0	4	0		60
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Grasp the system overview, binding channels to ports, control surface, layering, total recall, mixer modularity, and networking advantages in digital systems	U	2,10
2	Grasp acoustic basics and system design principles, applying skills in loudspeaker placement, acoustical treatment, and prediction software for optimal live sound environments.	U,S	2,10
3	Apply system testing and tuning skills, including pre-performance, performance, and post-performance tasks, utilizing software for system tuning.	A	2,10
4	Apply hands-on system design, simulate loudspeaker placement, and engage in live system testing, tuning, and program implementation.	A	2,9,10

***Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)**

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Digital Mixers .				
1	1.1	System Overview	1	1
	1.2	Binding Channels to Ports	1	1
	1.3	The Control Surface	5	1
	1.4	Layering, Total Recall , Mixer Modularity, Networking,	5	1
	1.5	The Digital Advantage .	1	1
Acoustics and System Design				
2	2.1	Acoustics basics - Sound waves, reflection, absorption, and room acoustics.	1	2
	2.2	System design principles - Choosing the right equipment based on venue size and audience needs.	3	2
	2.3	Loudspeaker placement and coverage - Designing a sound system for optimal coverage and clarity.	3	2
	2.4	Acoustical treatment - Techniques for improving sound quality in live sound environments.	3	2
	2.5	Introduction to acoustic prediction software - Modeling sound system performance in different venues.	3	2
System Testing				
3	3.1	System Testing, Tuning	4	3
	3.2	Pre-Performance, Performance And Post performance task	5	3
	3.3	Software for system tuning	5	3
MGU-UGP (HONOURS) practicum				
4	4.1	Hands-On System Design: Students will engage in a practical session where they design a live sound system, considering venue size, audience needs, and equipment selection. They will implement the principles learned in class to create an effective system layout.	2	4
	4.2	Loudspeaker Placement and Coverage Simulation: Using acoustic prediction software, students will simulate and analyze loudspeaker placement and coverage in various venue scenarios. This practical exercise aims to enhance their understanding of optimizing sound system performance.	3	4
	4.3	Live System Testing and Tuning: Students will participate in a live system testing and tuning session, applying real-time adjustments to optimize sound quality. This practical experience includes pre-performance, performance, and post-performance tasks, providing a holistic view of system testing procedures.	5	4
	4.4	Live Sound Program Implementation: Students will be involved in four live sound programs, actively participating in the setup, operation, and troubleshooting of sound systems for different events	10	4

Teaching and Learning Approach	<p>Classroom Procedure (Mode of transaction)</p> <p>CD1: Lecturing With Visual Aid Integration: Traditional Lecturing With Visual Aids (Slides, Diagrams, Multimedia) For Enhanced Comprehension.</p> <p>CD2: Hardware Demonstration - Explore the essential hardware components of live sound reinforcement, including microphones, mixers, and amplifiers, highlighting their functions and usage for a hands-on understanding</p> <p>CD3: Hands-On Practice: Engage in practical exercises and program demonstrations for direct application and skill development in a controlled learning environment."</p> <p>CD4: Practicum in the Real World: Apply acquired knowledge and skills to real-world scenarios, emphasizing practical application and problem-solving in authentic settings.</p> <p>CD5: Troubleshooting - Learn effective troubleshooting techniques for common issues in live sound reinforcement setups, addressing challenges related to hardware, connections, and signal flow to enhance problem-solving skills</p>

Mahatma Gandhi University Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ADVANCED IMMERSIVE MIXING TECHNIQUES.					
Type Of Course	DCC					
Course Code	MG7DCCSDV401					
Course Level	400-499					
Course Summary	Explore the evolution of object-based audio formats like Dolby Atmos and DTS:X in this advanced course. Understand sound objects, psychoacoustics, and their applications in film, music, gaming, and VR/AR. Engage in hands-on practicals using software like Dolby Atmos Renderer, mastering advanced mixing exercises, and refining critical listening skills. The course culminates in a project where students create a 10-minute Atmos mix for a fictional video, showcasing proficiency in immersive sound design.					
Semester	VII	Workstation			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/Practicum	Others	
	lecture tutorials, studio practice, and hands-on sessions	0	4	0	Library, assignment test, Etc.	60
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Understand the evolution of object-based formats, sound objects, and psychoacoustics, applying knowledge through hands-on mixing and creative sound design in practicals.	U,A	2,9,10
2	Apply advanced object-based techniques, mixing exercises, and sound design for immersive Atmos Or DTS:X experiences	A	2,10
3	Critically listen, compare, troubleshoot, and refine object-based mixes, emphasizing emotional storytelling and impactful design.	E	2,10
4	Apply technical specifications for object-based delivery, pre-mixing, final mixdown, and quality control, ensuring compliance with platform requirements.	A	2,10
5	Create an immersive soundscape for a 10-minute video, mixing in Atmos format for storytelling impact.	C	2,9,10

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Introduction				
1	1.1	Evolution of object-based formats: Dolby Atmos, DTS:X, and beyond.	2	1
	1.2	Concepts of sound objects, bed channels, and height channels. Psychoacoustics and spatial perception in object-based environments. Applications of object-based mixing in film, music, gaming, and VR/AR.	2	1
	1.3	Practicals: Hands-on introduction to object-based mixing software (Dolby Atmos Renderer, DTS:X Production Suite). Working with bed channels, height channels, and dynamic object parameters. Creative sound design and spatialization techniques for object-based formats.	3	2
Spatialization and Automation				
2	2.1	Advanced panning and localization techniques for precise object placement.	2	4
	2.2	Utilizing reverb, delay, and other spatial effects within object-based workflows.	3	4
	2.3	Dynamic object behavior and automation: movement, morphing, and interaction.	3	
	2.4	Immersive sound design for specific applications (dialogue placement, foley, music).	5	
	2.5	practical: Advanced mixing exercises focusing on creative spatialization in Atmos and DTS:X. Implementing and editing dynamic object behavior and automation. Designing immersive soundscapes for film trailers, gaming sequences, or VR experiences.	10	
Critical Listening and Refinement				
3	3.1	Developing critical listening skills for object-based mix evaluation. Reference mixes and best practices for achieving professional-grade quality.	2	5
	3.2	A/B testing and comparison of different object-based mix versions. Troubleshooting common object-based mixing issues and solutions.	3	5
	3.3	practical: Critical listening exercises and peer feedback sessions on student mixes. Refining and polishing object-based mixes for optimal clarity, balance, and immersion. Mastering the art of storytelling and emotional impact through object-based sound design.	5	5
4	4.1	Technical specifications and requirements for different object-based delivery platforms (Blu-ray, streaming services, theatrical DCP).	3	6
	4.2	Pre-mixing, final mixdown, and exporting object-based master files.	2	6
	4.3	Quality control checks and ensuring compliance with delivery specifications.	5	6

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	ACOUSTICS AND CALIBRATION.					
Type Of Course	DCE					
Course Code	MG7DCESDV401					
Course Level	400-499					
Course Summary	This course delves into sound production and reproduction, exploring live classical and popular music performances. It focuses on the perceptual and physical dimensions of sound, covering frequency and amplitude domains, distortions, and room acoustics. The project emphasizes calibrating audio systems for optimal performance in various spaces using real-time analysis and tuning methodologies.					
Semester	VII	Workstation			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical/Practicum	Others	
	lecture tutorials, studio practice, and hands-on sessions	0	4	0	Library , assignment test, Etc.	60
Pre-requisites, if any						

COURSE OUTCOMES (CO)

CO No.	Expected Course Outcome	Learning Domains	PO No
	Upon completion of this course, students will be able to;		
1	Grasp distinctions between sound production, live performances, reproduced sound, preserving art, and room acoustics.	U	1,2,9
2	Develop a comprehensive understanding of frequency and amplitude domains, distortion, resonance, critical bands, and room acoustics.	U	1,2
3	Apply the understanding of room acoustics, loudspeaker/room interactions, monitor placement, and cinema sound fields in practical audio engineering scenarios.	A	1,2,9,10
4	Apply techniques for calibrating speakers, amplifiers, processors, and real-time analysis to optimize the integrated audio system.	A,S	1,2,10

***Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)**

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Introduction				
1	1.1	Sound Production vs. Sound Reproduction, Live Classical Music Performances—Sound Production, Live Popular Music Performances—Sound Production, Reproduced Sound—The Audio Industry, Preserving the Art—The Circle of Confusion , Music and Movies—The State of Affairs, The Role of Loudspeakers and Rooms, Human Adaptation, a Reality That Cannot Be Ignored	5	
The Perceptual and Physical Dimensions of Sound				
2	2.1	The Frequency Domain, The Amplitude Domain, Amplitude and Frequency Together: Frequency Response, Amplitude and Frequency Together: Equal-Loudness Contours , Loudness Controls and Tone Controls—Do They Work, Are They Necessary, The Boundaries of What We Can Hear, Acceptable Background Noise.	5	
	2.2	Linear Distortions: Amplitude and Phase vs. Frequency , Spectral Tilt, Resonances Viewed in Frequency and Time , Finding and Fixing Resonances , A Persistent Problem: Differentiating between Evidence of Resonances and Acoustical Interference , Critical Bands, ERBNs and the “Resolution” of the Hearing System ,	5	4
	2.3	Amplitude, Frequency and Time Together: Waterfall Diagrams , The Audibility of Phase Shift and Group Delay , Phase Shift at Low Frequencies: A Special Case, The Audibility of Absolute Polarity	5	
	2.4	Non-linear Distortion.	5	
	2.5	Wavelength, the Key to Understanding Much in Audio, Loudspeaker Directivity , Room Resonance Basics, Resistive/Porous Absorbers and Membrane/ Diaphragmatic Absorbers, Diffusers and Other Sound-Scattering Devices	5	
Loudspeaker/Room Systems—An Introduction				
3	3.1	One Room, Two Sound Fields—The Transition Frequency, Brief History of Loudspeaker/Room Interactions, Timbral and Spatial Effects Attributable to Rooms .	5	5
	3.2	Monitor placement -Monitoring Stereo, Far-Field Monitoring, Near-Field Monitoring , Monitoring Surround Sound	5	5
	3.3	Sound in Cinemas, Sound Fields in Cinemas , A Loudspeaker in a Cinema, Adding a Screen and Applying the X-curve, The Origins of the X-curve, Compatibility within the Cinema World, The Effects of Room Size and Seats	5	5
Project				
4	4.1	Techniques for calibrating speakers, amplifiers, and processors, Real-time analysis and tuning methodologies, Tuning an integrated audio system for optimal performance.	15	6

RAW Formats				
1	1.1	Introduction to different types of RAW formats. (Red,Arri,Sony.)	3	1
	1.2	Transcoding RAW files into Proxy using different softwares such as Davinci, RedCine etc. – Project settings, labelling.	3	
PROXY Generation				
2	2.1	Project creation in NLE software using PROXY files. Project settings, folder management.	3	2,1
	2.2	Different stages of edit - rough cut to Final Cut. Different timelines, Tracks management.	15	
	2.3	Using Transitions and graphics in Timeline.	4	
EDL/XML				
3	3.1	Finalising the Timeline, cleaning unwanted Tracks, Organising tracks and EDL/XML generation.	5	3,2,1
	3.2	Setting up DI software, Importing EDL/XML into DI Software and conforming the Timeline.	7	
	3.3	Conforming the cut points and correcting Transitions and graphics.	7	
Final Output				
4	4.1	Checking the output settings. Generating master .MOV file as a final output.	5	4,3,1
	4.2	Generating different formats for different mediums. (MP4,DCP). Compression and renaming.	8

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	BINAURAL AND SPATIAL AUDIO.					
Type Of Course	DCC					
Course Code	MG8DCCSDV401					
Course Level	400-499					
Course Summary	Exploring the intricacies of spatial sound, this advanced course delves into binaural hearing, psychoacoustics, and spatial audio formats such as Ambisonics and Dolby Atmos. Students engage in practical exercises, recording with binaural microphones, and creating immersive soundscapes for VR, gaming, and film. The curriculum covers advanced techniques, calibration, and personalized optimization, leading to a creative project showcasing learned skills.

Module	Units	Course description	Hrs	CO No.
The Science of Sound in Space				
1	1.1	Understanding binaural hearing and psychoacoustics of spatial perception.	5	1
	1.2	Exploring head-related transfer functions (HRTFs) and their role in binaural audio. Examining different spatial audio formats: Ambisonics, binaural, Dolby Atmos, DTS:X.	5	1
	1.3	Practice-Recording with binaural microphones and understanding microphone techniques, Working with binaural audio plugins and software for spatialization and mixing, Analyzing and comparing different HRTF sets for optimal realism and localization.	5	1
Building Immersive space				
2	2.1	Designing soundscapes for binaural and spatial audio: layering, panning, reverb, effects, Crafting virtual environments and storytelling techniques for immersive experiences, Understanding 3D audio mixing principles and tools for precise positioning.	5	2
	2.2	Practice: Creating immersive binaural soundscapes for specific applications (VR, gaming, film, music), Implementing interactive elements and dynamic changes in spatial audio environments, Experimenting with advanced spatial audio tools and plugins for creative sound design.	10	2
Workflow Optimization				
3	3.1	Exploring advanced binaural microphone techniques: Ambisonics encoding, foley recording, head tracking.	5	5
	3.2	Understanding calibration and optimization of HRTFs for personalized listening experiences, Analyzing audio delivery formats and platforms for binaural and spatial content.	5	5
	3.3	Practice: Calibrating HRTFs and optimizing binaural mixes for individual listeners, Working with Ambisonics encoders and decoders for immersive content creation, Preparing binaural and spatial audio content for different playback platforms and environments.	15	5
Project				
4	4.1	Students choose a specific theme or application and design a creative binaural/spatial audio project showcasing their learned skills. Project planning, sound design, mixing, and post-production with guidance and feedback from instructors.	20	6

COURSE CONTENT

Content for Classroom Transactions (Units)

Module	Units	Course description	Hrs	CO No.
Understanding Song Arrangement				
1	1.1	Musical Instruments and their Frequency Ranges, Concept of Masking		1
	1.2	Introduction to Music Genres & Styles (Indian & Western) & their arrangement structure		1
	1.3	Basic Principles of Music Arrangement, Role of Harmony and Voicings		1
Music Programming using MIDI				
2	2.1	Basic MIDI Connections, Introduction to Virtual Instruments, Virtual Instruments Routing and setup, Virtual Instrument formats for different DAW's, Setup and Installation, Setting up a session in DAW		2
	2.2	Rhythm Programming, Step Sequencing, Chords and Backing, Other musical Layers		2
	2.3	MIDI Editing Techniques - Quantization, Note Editing, Legato techniques, Transposition, Sound Variations, Adjusting Velocity and Expression, Use of MIDI CC controls, Custom CC Mapping		2
Music Programming Tools and Editing Techniques				
3	3.1	Sampling vs Synthesizer, Sample Library vs Modelling, Sampling Techniques for Music Production, Using multichannel MIDI instruments, Common software instruments - Omnisphere, Kontakt, Serum, Nexus etc.		
	3.2	Sound Design using Software synthesizers, Integrate software and hardware synths, Creating new sounds		
	3.3	Loops and Samples - Using loops and samples in the production, time-stretching and transposing		
Export and Delivery				
4	4.1	Track Freeze, Convert to Audio, Bounce-in-place		
	4.2	Exporting tracks as Stems for delivery to mix, Delivering a session for Mix		
	4.3	Audio File formats, Audio Interchangeable File Formats (OMF, AAF)		
	4.4	Project: Prepare an original song

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING					
Course Name	3D EDITING					
Type of Course	DCE					
Course Code	MG8DCESDV402					
Course Level	400-499					
Course Summary	This course equips the students to master the art of short narrative editing from raw footage into captivating story.					
Semester	VIII	Credits			4	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical	Others	
	Studio practice, and hands-on practicum sessions	0	3	1	assignment, test	75
Pre-requisites, if any						

COURSE OUTCOMES (CO)

After completing the Course, the Student will be able to

CO No.	Expected Course Outcome	Learning Domains *	PO No
1	apply editing techniques to compelling storytelling with respect to 3D editing.	A	1,2,10
2	develop skill in 3D editing and apply technical Proficiency in software.	S,A	1,2,10
3	develop skill in 3D editing style and explore innovative storytelling techniques.	S,A	1,2,10
4	Create a short narrative from given 3D footage from rough cut to final cut.	C	1,2,10

***Remember (K), Understand (U), Apply (A), Analyse (An), Evaluate (E), Create (C), Skill (S), Interest (I) and Appreciation (Ap)**

COURSE CONTENT

Content for Classroom transaction (Units)

Module	Units	Course description	Hrs	CO No.
3D Film History				
1	1.1	Technical history of stereo Cinema; beginning, technical advance.	5	1
	1.2	Stereopsis and stereoscopy; technicality.	5	1,2
	1.3	History of stereoscopic projection. How it changes from time to time.	5	1,2
Overview of 3D Technique				
2	2.1	The formation of the stereoscopic image.	8	2
	2.2	Stereoscopic vision and 3D photography. Common 3D Formats.	5	2
3D Cinematography & Editing				
3	3.1	3D cinematography; depth perception, parallax.	5	3
	3.2	Different lenses; focus and depth. Lighting. 3D camera setup.	9	3
	3.3	Working with stereoscopic footage. Workflow; setting up project to final edit.	3	3,2
3D Editing Exercise				
4	4.1	Create a short narrative from given 3D footage. (First Cut - Final Cut)	20	4,3,2,1
	4.2	Provide constructive feedback and participate in the revision process to refine the film.	10	4,3,2,1

Kottayam

Programme	BA(Hons)SOUND DESIGN AND VISUAL EDITING				
Course Name	CAPSTONE PROJECT				
Type of Course	Major				
Course Code	MG8PRJSDV400				
Course Level	400				
Course Summary	Dive into the captivating world of film production with industry experts. This intensive masterclass will equip the student with the essential skills and knowledge to develop a screenplay. From the screenplay they shoot the film as a group and will do the post production individually.				
Semester	8	Credits		12	Total Hours
Course Details	Learning Approach	Lecture	Tutorial	Practical	
Pre-requisites, if any	Syllabus				

HONOURS PROJECT

Guidelines for Honours Project *

- For the successful completion of BA Sound Design and Visual Editing (Honours), the learners will equip with the essential skills and knowledge to develop a screenplay under the guidance of an industry expert. Based on the above screenplay they will shoot the narrative film as a group. Once they complete the shooting each learner will do the post-production (Editing, Sound designing and mixing) individually. The duration of the narrative film should be 22-30 minutes.
- The learner should accomplish various stages of filmmaking and should verify the competence with industry standards.

A. Continuous Comprehensive Assessment (CCA) for 30 marks

Assignments x 2 : 20 marks

Story presentation : 20 marks

Preproduction : 20 marks

B. End Semester Examination (ESE) for 70 marks.

Editing : 20 marks

Sound Design : 20 marks

Final Output : 50 marks

Record Book. : 20 marks

VIVA : 30 marks

**more details will be published later*

Syllabus

Syllabus revision workshop participants

1. Sri.Binil C Amakkadu, Assistant Professor, St.Joseph College of Communication, Changanassery.
2. Sri.Adhil Maimoonath Asharaf, Assistant Professor, St.Joseph College of Communication, Changanassery.
3. Sri.Unnikrishnan K, Assistant Professor, St.Joseph College of Communication, Changanassery.
